

Printed Circuits Professional

Step-by-step functionalities

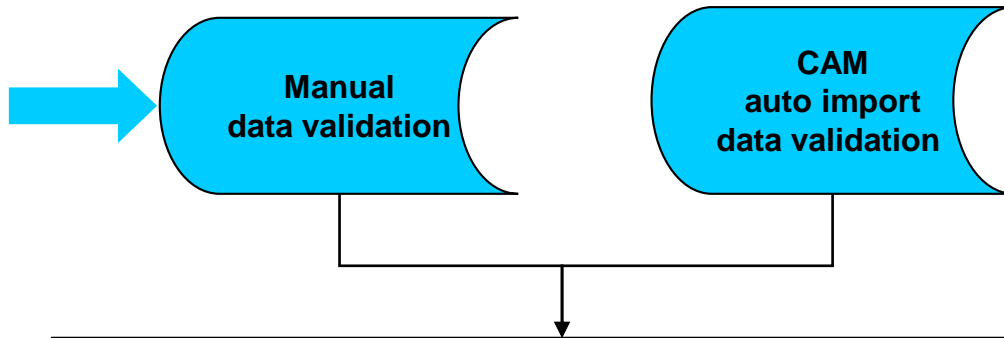

Enquiries / Quotations

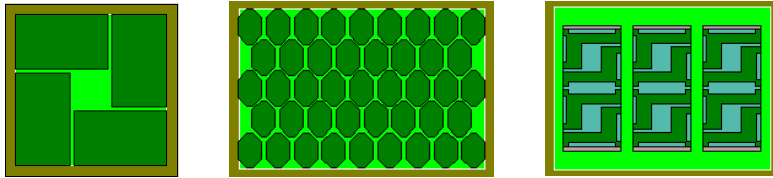

Engineering / Planning

- Automated & manual panel lay-up
- Mix product panelisation from different customer

- Raw material allocation to works-order
- Create multi-level constructions, (sub-construction & pre-fabricated components)

--	---	---

- Automatically generates process instructions based on route & product specification
- Provides the ability to generate bills of material (BOM) for all process routes
- Allow sub-constructing of processes, inner layers, pre-fabricated components or the entire product
- Automated process route generation with the ability to modify
- Generates process route for every construction, pre-fabricated components and component assembly based on user define rules & constraints

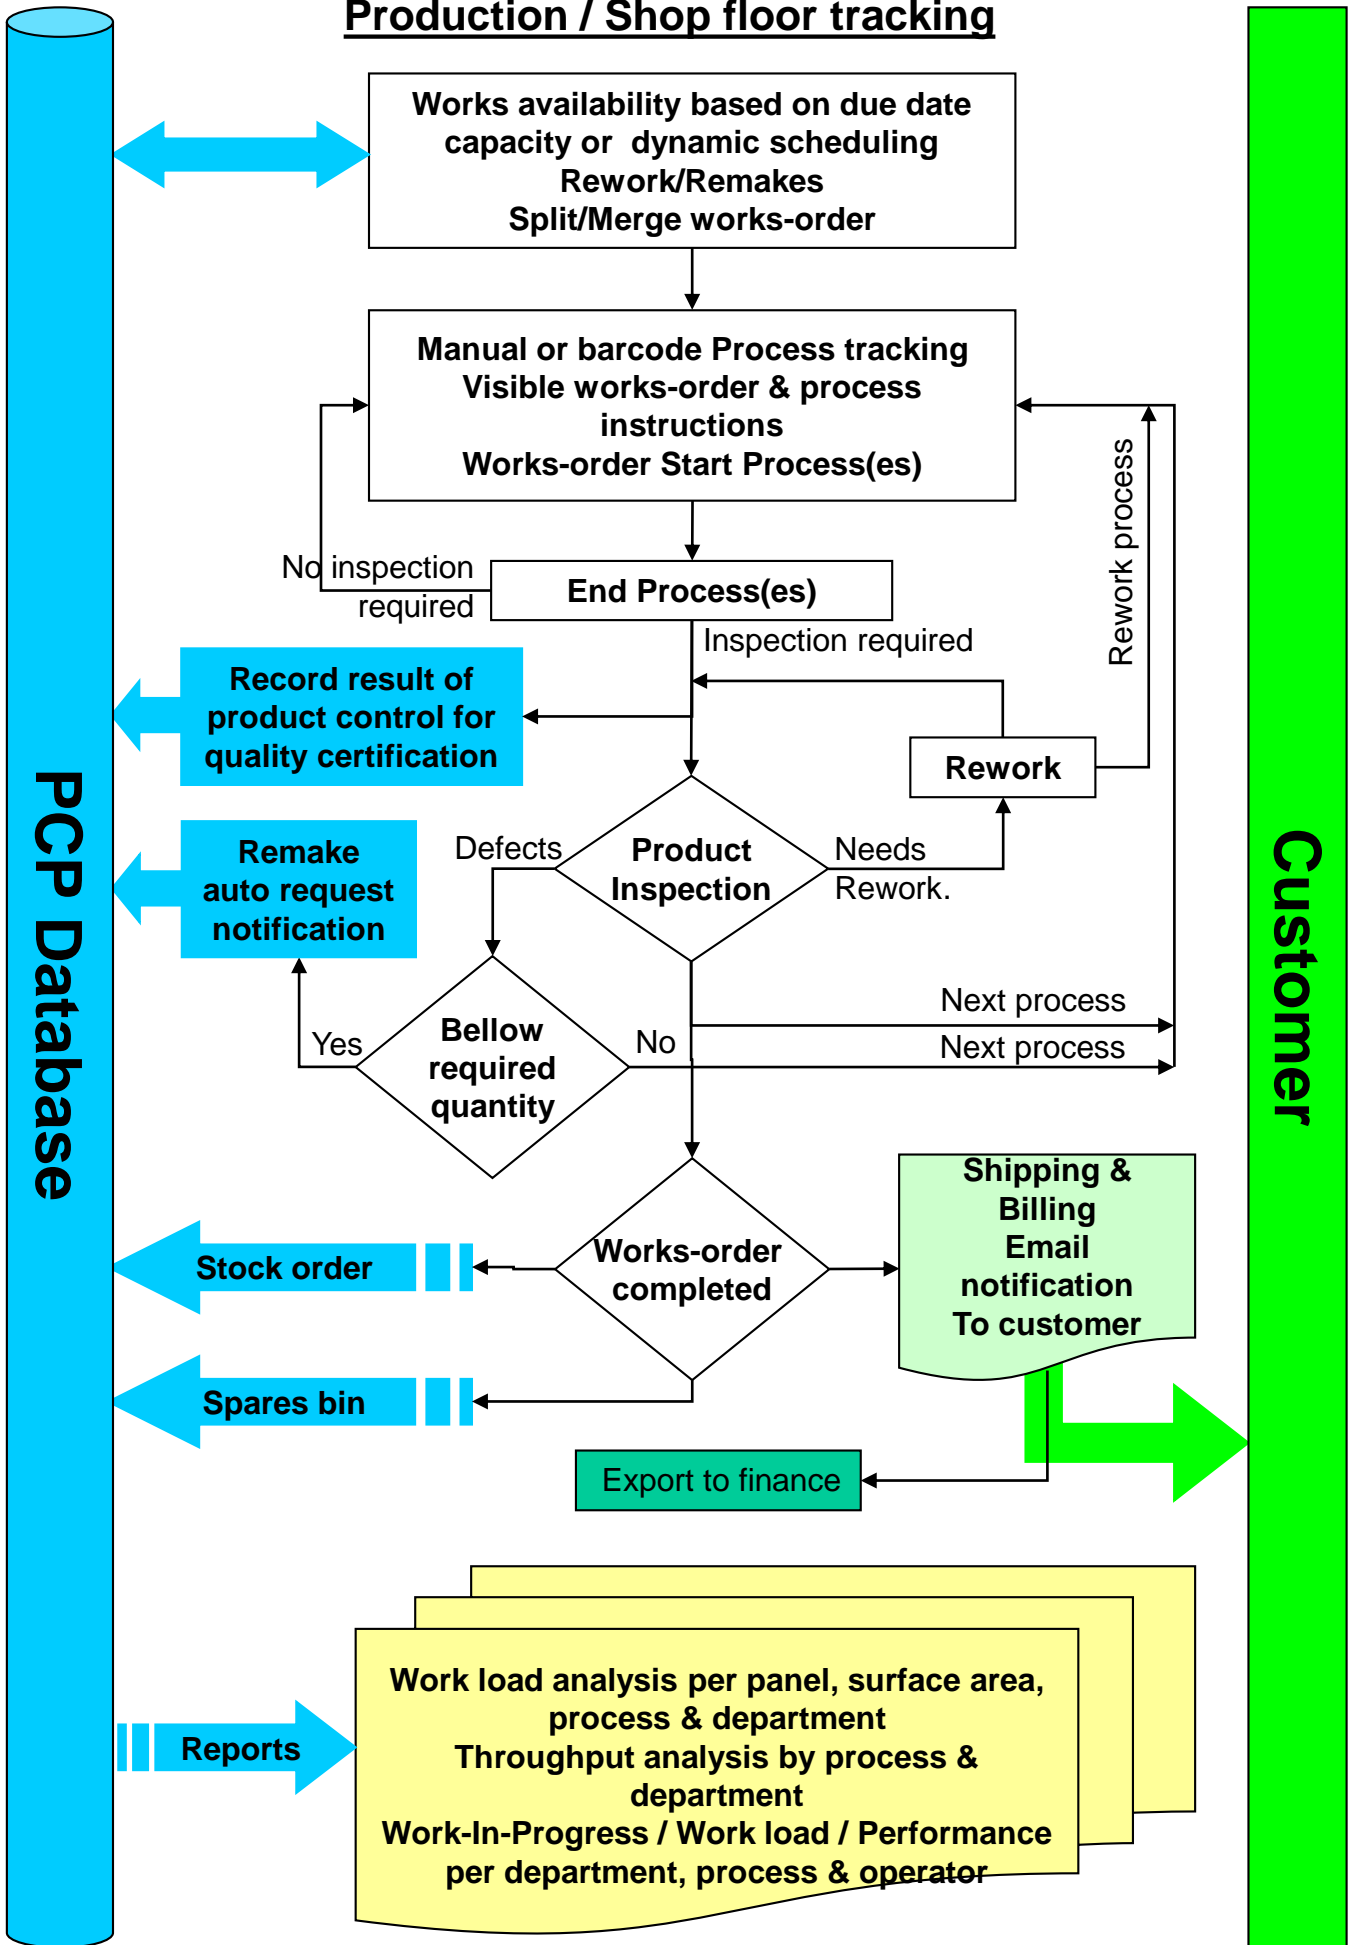

To manufacturing

Automated process route generation, raw material allocation, BOM & build sheets

PCP Database

Customer

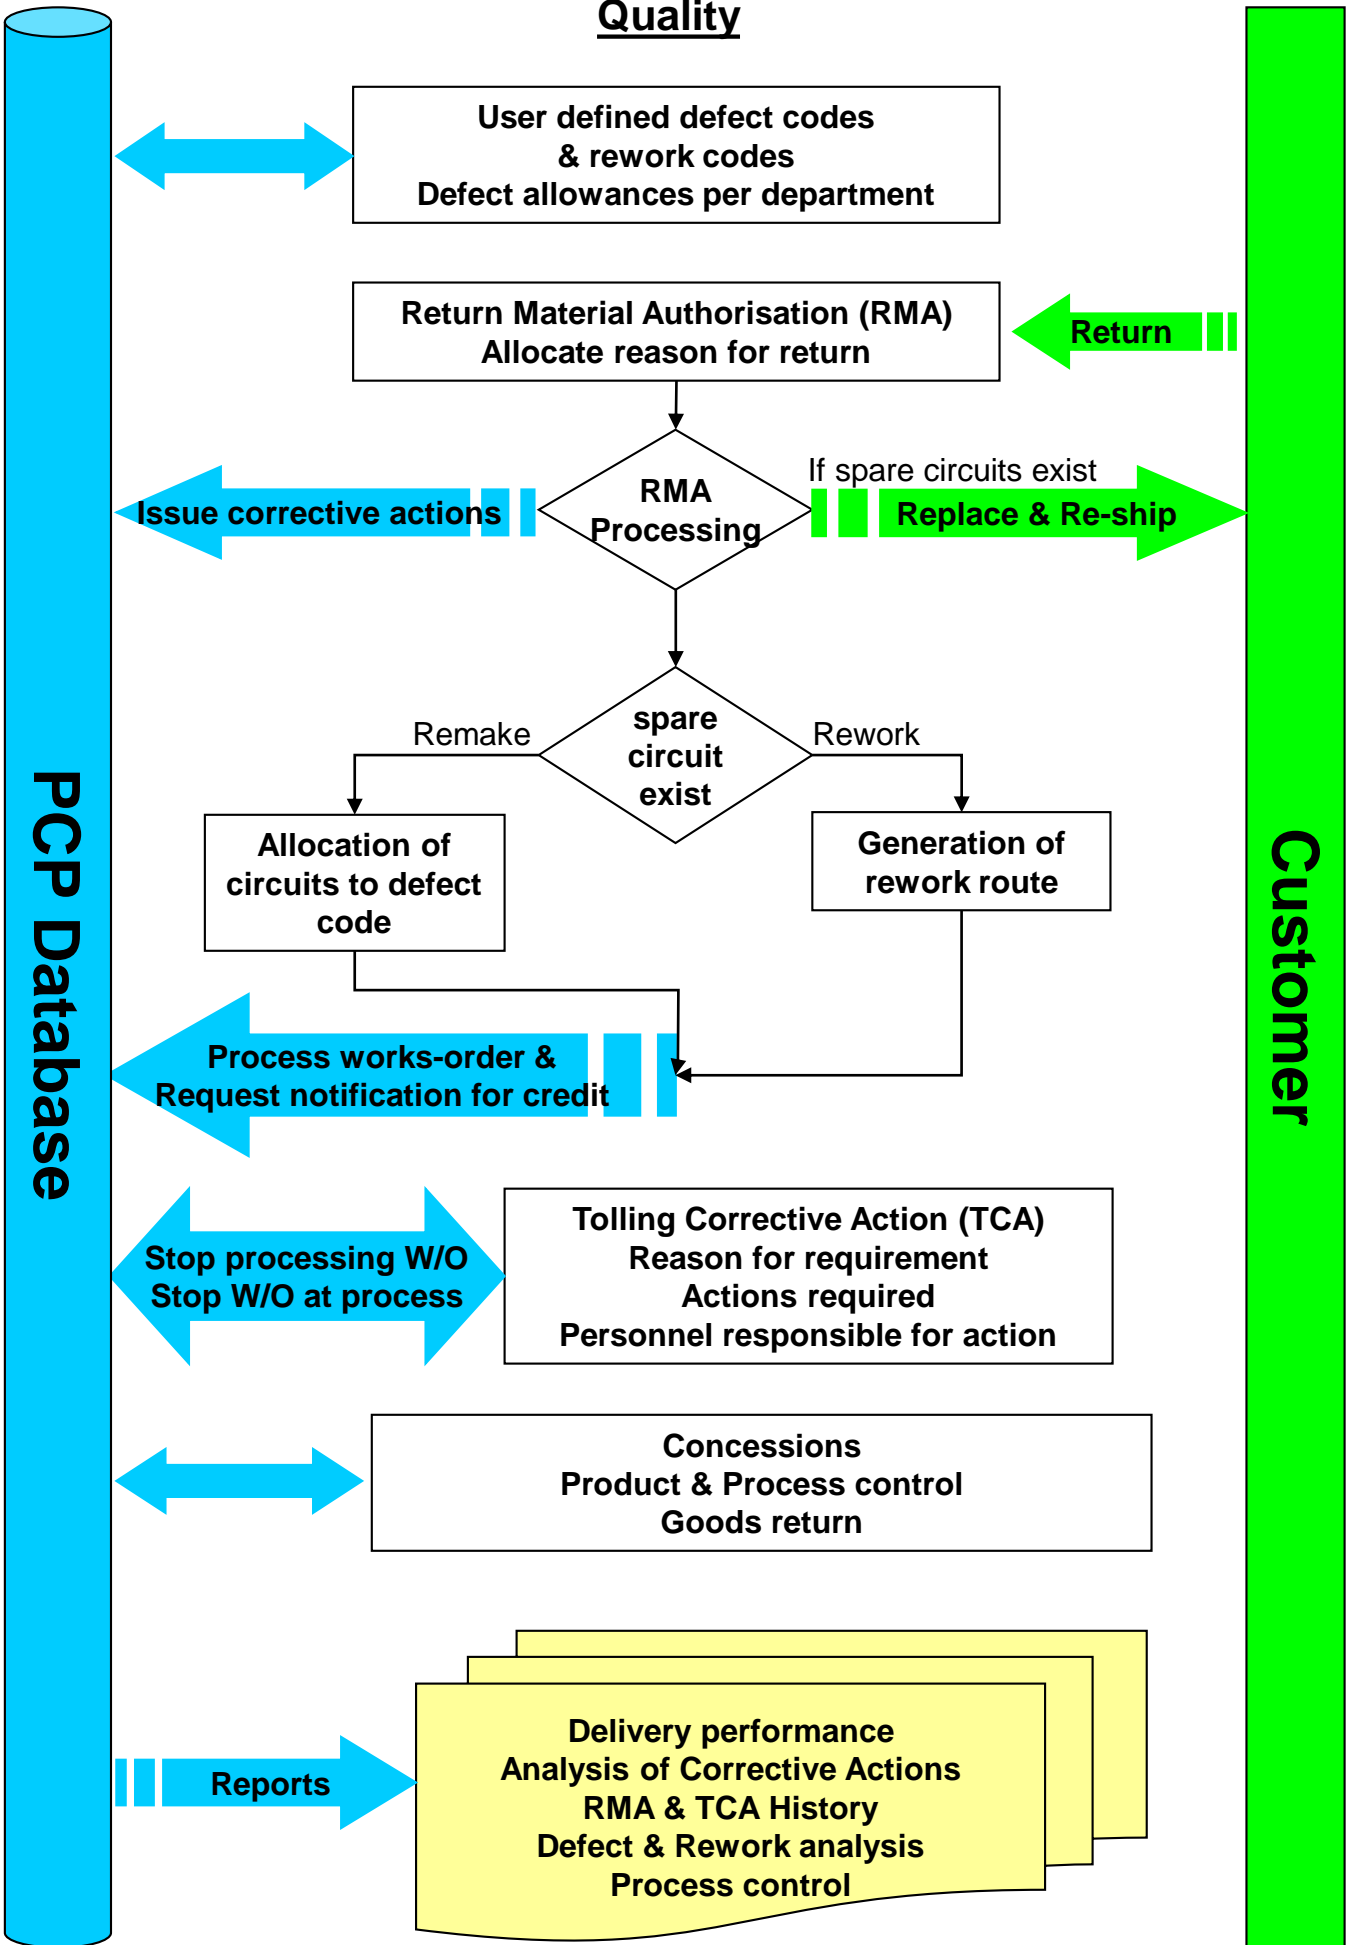

Production / Shop floor tracking

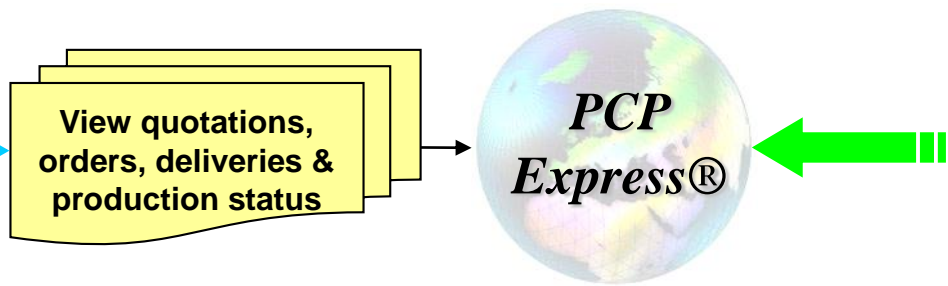

PCP Database

Customer

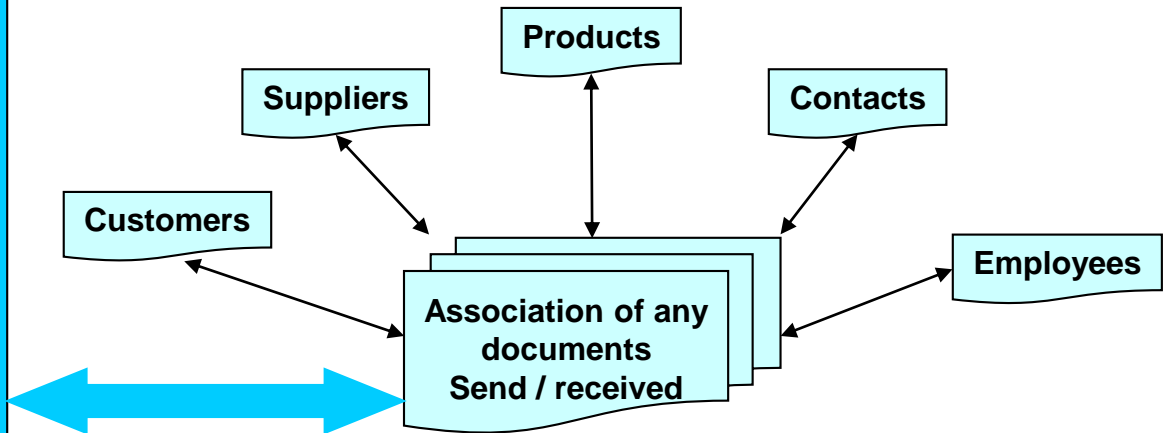

Quality

Customer online access

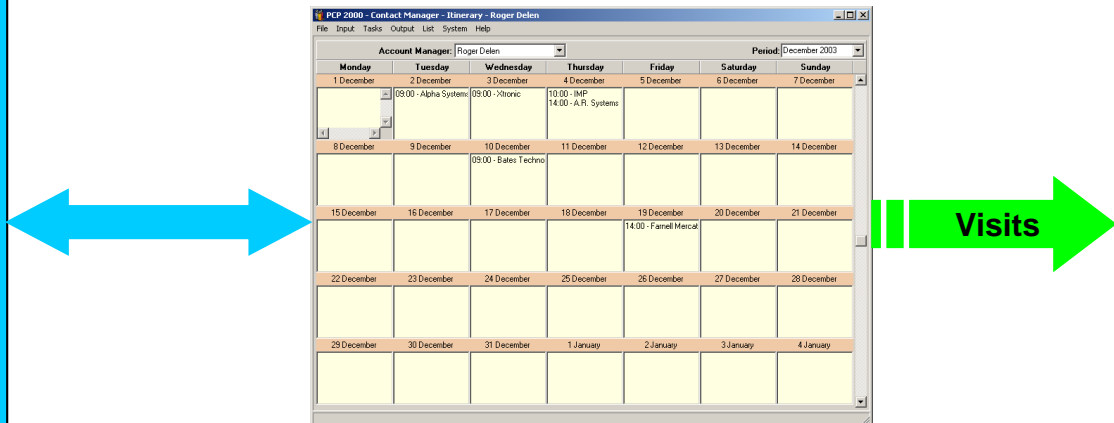

Document management

Contact management

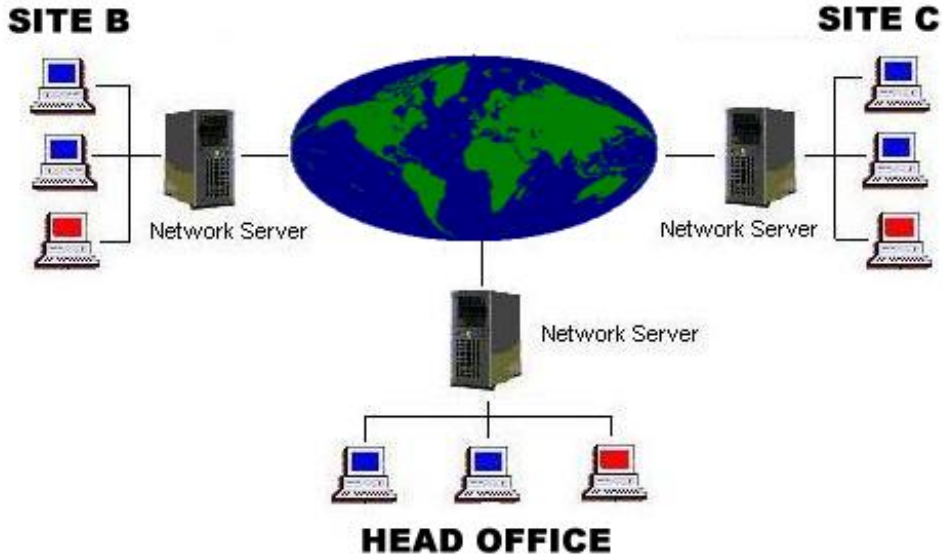

- Management of customer communication, appointments & visits
- Generates automated agendas, tasks, visit reports

- Automated tasks & action remainder

Multi-site

Replication / synchronisation of selected information across multiple sites through the internet

Management of site technology capabilities & customer accreditation
Multi-site costing, order appropriations & inter company transactions
